Project Chosen Two site for one
company

2. Secure Multisite BGP/MPLS Backbone with VPN Services

- **What need To be done.**
- • Design backbone with multiple sites (datacenters + branches).
- • Configure MPLS core with LDP or Segment Routing.
- • Implement MP-BGP for VPNv4 routes.
- • Create Layer 3 VPNs for customer separation.
- • Add security features (ACLs, IPSec if needed).
- • Test failover and traffic engineering..

Secure Multisite BGP/MPLS Backbone with VPN Services - Understanding Required

- • BGP concepts (peering, route-reflectors, attributes).
- • MPLS forwarding and label distribution.
- • VPN technologies (L3VPN, CE-PE model).
- • Security mechanisms for backbone traffic.
